### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edwin Paul on October 27, 2006.

The application has been amended as follows:

At Claim 8, line 16, after "process", insert "without having to close and restart the process manager."

At Claim 70, line 10, and replace "control object" with "configuration object".

At Claim 75, line 8, and replace "control object" with "configuration object".

2. The following is an examiner's statement of reasons for allowance: The claims are allowable for at least the following reason: Claims 1-6, 8-10 and 16-21 indicate allowable subject matter of "in response to opening a new application / process / application process issuing a registration request from the new entity to register with a manager, automatically and dynamically displaying a notification of the registered entity

Art Unit: 2195

without having to close and restart the manager". The cited prior art of record teaches portions of the claimed language but does not properly teach all of the cited language that meets the requirements of 35 U.S.C. 103. Some of the prior art teach automatically and dynamically modifying parameters associated with registered processes or automatically and dynamically displaying an indication of a new process, however other references allude to the processes being pre-registered or once registered with a manager the manager must re-start in order to manipulate/display those processes. In other prior art references, the processes do not register with the manager but are dynamically determined by another entity or the manager itself. This would not meet the limitation of the process registering with the manager and displaying the registered process without restarting the manager as outlined in the claims. Therefore, these claims are allowable based upon the allowable subject matter as indicated above, since none of the prior art of record adequately teaches this language.

Claims 33-42 and 52-76 detail steps of modifying / configuring a registered process by generating a configuration object, receiving a remotely provided applet of the application and displaying the applet in the user interface to configure and pass parameter modifications to dynamically change the parameters of the application. None of the cited prior art of record teach steps of modifying registered applications as outlined in the claims and therefore the cited claims are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
